

3. Reconnaissance

Ekstrakcija početnog korisničkog imena

Na osnovu prethodnog koraka (Task 2), uspešno je identifikovano jedinstveno korisničko ime napadača: SakuraSnowAngelAiko.

Background

It appears that our attacker made a fatal mistake in their operational security. They seem to have reused their username across other social media platforms as well. This should make it far easier for us to gather additional information on them by locating their other social media accounts.

Instructions

Most digital platforms have some sort of username field. Many people become attached to their usernames, and may therefore use it across a number of platforms, making it easy to find other accounts owned by the same person when the username is unique enough. This can be especially helpful on platforms such as on job hunting sites where a user is more likely to provide real information about themselves, such as their full name or location information.

A quick search on a reputable search engine can help find matching usernames on other platforms, and there are also a large number of specialty tools that exist for that very same purpose. Keep in mind, that sometimes a platform will not show up in either the search engine results or in the specialized username searches due to false negatives. In some cases you need to manually check the site yourself to be 100% positive if the account exists or not. In order to answer the following questions, use the attacker's username found in Task 2 to expand the OSINT investigation onto other platforms in order to gather additional identifying information on the attacker. Be wary of any false positives!

Not too concerned about someone else finding them on the Dark Web. Anyone who wants them will have to do a real DEEP search to find where I PASTEd them.

Pretraga javnih platformi i repozitorijuma

Koristeći pretragu po korisničkom imenu, lociran je javni GitHub profil napadača pod istim imenom. Unutar njegovih repozitorijuma, uočen je javni projekat pod nazivom PGP. Nakon otvaranja i analize PGP javnog ključa pomoću GPG dekodera, u

korisničkim podacima ključa (User ID) uspešno je pronađena ispisana puna e-mail adresa: SakuraSnowAngel83@protonmail.com.

OSINT pretraga na platformama za zapošljavanje

Izvršena je pretraga istog nadimka na LinkedInu. Pronađen je profil koji se u potpunosti poklapa sa podacima osumnjičenog, gde je eksplicitno navedeno njegovo puno pravo ime i prezime: Aiko Abe.

Answer the questions below

What is the full email address used by the attacker?

SakuraSnowAngel83@protonmail.com ✓ Correct Answer

What is the attacker's full real name?

Aiko Abe ✓ Correct Answer

4. Unveil

Background

It seems the cybercriminal is aware that we are on to them. As we were investigating into their Github account we observed indicators that the account owner had already begun editing and deleting information in order to throw us off their trail. It is likely that they were removing this information because it contained some sort of data that would add to our investigation. Perhaps there is a way to retrieve the original information that they provided?

Instructions

On some platforms, the edited or removed content may be unrecoverable unless the page was cached or archived on another platform. However, other platforms may possess built-in functionality to view the history of edits, deletions, or insertions. When available this audit history allows investigators to locate information that was once included, possibly by mistake or oversight, and then removed by the user. Such content is often quite valuable in the course of an investigation. In order to answer the below questions, you will need to perform a deeper dive into the attacker's Github account for any additional information that may have been altered or removed. You will then utilize this information to trace some of the attacker's cryptocurrency transactions.

Answer the questions below

What cryptocurrency does the attacker own a cryptocurrency wallet for?

Answer format: *****

Check

What is the attacker's cryptocurrency wallet address?

Answer format: *****

Check

What mining pool did the attacker receive payments from on January 23, 2021 UTC?

Answer format: *****

Check

What other cryptocurrency did the attacker exchange with using their cryptocurrency wallet?

Answer format: *****

Check

Analiza skrivenih repozitorijuma na GitHub-u:

Prateći smernice iz teksta zadatka da je napadač počeo da briše podatke kako bi zavarao trag, izvršena je dublja inspekcija GitHub profila. Otvaranjem kartice Repositories, uočen je repozitorijum pod nazivom ETH koji je naizgled bio prazan ili je sadržao samo jednu liniju koda.

The screenshot shows the GitHub profile of user **sakurasnowangelaiko**. The profile includes a bio, a follow button, and statistics showing 255 followers and 0 following. The pinned repositories section lists four repositories:

- cpuminer** (Public): Forked from pooler/cpuminer, CPU miner for Litecoin and Bitcoin, Assembly, 2 stars, 8 forks.
- IO** (Public): 3 stars, 4 forks.
- Mailpile** (Public): Forked from mailpile/Mailpile, A free & open modern, fast email client with user-friendly encryption and privacy features, Python, 3 stars.
- PGP** (Public): PGP Keys, 9 stars, 28 forks.

The contributions section shows 0 contributions in the last year, with a calendar view for the months of June through June.

Pregled istorije izmena (Commit History)

Pregledom istorije komitova za pomenuti repozitorijum, pronađen je obrisani kod pre nego što je zamenjen generičkim tekstom. U istorijskom zapisu identifikovan je sledeći string za konfiguraciju rudarenja:

stratum://0xa102397dbeeBeFD8cD2F73A89122fCdB53abB6ef.Aiko:pswd@eu1.ethermine.org:4444

Ekstrakcija novčanika i praćenje transakcija

Iz pronađenog stringa uspešno su identifikovani ključni podaci:

Kriptovaluta: Budući da je naziv repozitorijuma ETH, a adresa počinje sa karakterističnim 0x, u pitanju je Ethereum.

Adresa novčanika: 0xa102397dbeeBeFD8cD2F73A89122fCdB53abB6ef.

ETH Price: \$1,572.15 (-5.33%) Gas: 2.093 Gwei

Analiza javnog ledger-a (Etherscan)

Unosom ove adrese na javni blockchain explorer (etherscan.io), analizirala sam istoriju transakcija napadača:

Mining Pool: Transakcija izvršena 23. januara 2021. godine stigla je direktno od poznatog pool-a za rudarenje pod nazivom Ethermine.

Druga kriptovaluta: Pregledom token transakcija (Token Transfers) unutar novčanika, primećena je razmena i interakcija sa stabilnom kriptovalutom Tether (USDT).

Answer the questions below

What cryptocurrency does the attacker own a cryptocurrency wallet for?

Ethereum

✓ Correct Answer

What is the attacker's cryptocurrency wallet address?

0xa102397dbecFD8cD2F73A89122fCdB53ab86ef

✓ Correct Answer

What mining pool did the attacker receive payments from on January 23, 2021 UTC?

Ethermine

✓ Correct Answer

What other cryptocurrency did the attacker exchange with using their cryptocurrency wallet?

Tether

✓ Correct Answer
